

7 Services

We are the only manufacturer of laboratory equipment who offers you fume cupboards and variable fume cupboard control all from one supplier. Benefit from our know-how in the field of laboratory control.

All over the world we have realised a large number of projects of varying size; these projects are operated to the great satisfaction of our customers. This fact confirms our philosophy of acting as a system provider.

Furthermore, you as a customer will find it convenient and economical to have only one contact for all questions on the issue and also for maintenance.

Being a full-range supplier, we will plan and implement your project in no time – in the typical Waldner way. Being a market leader, we have the necessary capacity for your project – no matter how big. Please contact us. We will be glad to help you.

7 Services

Large cost savings in every operating state

From an economic point of view, the laboratory furniture and the ventilation of the entire laboratory building are no longer separate entities today. Waldner's intelligent laboratory control significantly reduces the operating costs of the ventilation system and ensures maximum work safety.

Sophisticated technology for optimum operation

Our fume cupboards are an important part of laboratory ventilation and can be integrated into the building ventilation concept in an ideal way. The measurement and control system of our Airflow-Controller identifies the state of utilisation of the fume cupboard reliably at any time and adjusts the air exchange rate precisely and safely within seconds.

If required, the user can increase or decrease the air exchange rate at the fume cupboard manually at any time.

Investing in our laboratory control will quickly pay for itself

A cost-benefit analysis clearly speaks for our laboratory control: Since the ventilation system is efficiently used while the energy supply is reduced, investing into this laboratory control system will pay off within one to two years. Considering continuously increasing energy prices, this is an important advantage.

Ventilation and control as an overall concept

Being a leading system partner, we will develop an overall concept for your laboratory – from the appropriate sizing of the central ventilation system and the ducts to the selection and use of the appropriate process measuring and control technology.

Control

Control – Airflow-Controller (AC) for fume cupboards DIN EN 14175-6

Airflow-Controller AC

The central control unit is a microprocessor-based electronic control unit and forms the heart of the Waldner control system.

The standard set value for the air exchange rate is determined via the sash position. The processor rapidly and precisely adjusts this value using defined control behaviour (adaptive or predictive). The microprocessor detects the required damper position, has a maximum regulating speed of two seconds for 90° and is equipped with a position control system. Setpoint changes settle fully within three seconds.

In addition during calculation, an appropriate measuring diaphragm coefficient is determined using a family of characteristics defined from the damper position and the differential pressure.

In accordance with EN 14175, a visual and acoustic alarm indicates when the value drops below the set value. A visual and acoustic alarm is also generated if the sash is opened beyond the maximum permitted sash opening.

As a standard, the control flap is used with an extract manifold. For rooms less than 3.30 m, motorised dampers must be used as pipe controllers.

On the use of the Secuflow technology, this feature is monitored and controlled. If the extract air volume drops below the stipulated extract air volume, the supportive flow technology is shut down.

If the supportive flow technology fails, this is indicated by a visual and acoustic alarm, and the extract air flow rate is automatically increased to the value for a standard fume cupboard.

4 Central control unit AC

Control and monitoring Control

The fume cupboard and controller are an entity

The systems are precisely matched to each other, thus ensuring maximum reliability during laboratory operation.

The fume cupboard and variable air volume control are type-approved in accordance with EN 14175-6 as a complete safety system. Thus, the time-consuming and costly coordination of different trades becomes unnecessary and legal security and warranty are provided by one supplier, if need be.

Our patented measurement method and measuring system

Due to the variable measuring diaphragm coefficient and the special principle of operation of the measuring system, an airflow stroke of 1:15 can be realised. During night operation, the air volume at the fume cupboard can thus be reduced to 100 m³/h.

A measuring accuracy of +/- 5 % of the current actual value of the air exchange rate is also guaranteed. This is necessary to ensure that the directed airflow in the laboratory is maintained even if the air exchange rates are low.

EN 14175-6 type tested fume cupboard control in acc. with 5.4
Measuring in the outer measuring level

Technical data

Characteristics	
Air exchange rate range for diameter DN 250	100 - 1500 m³/h
Air exchange rate range for diameter DN 315	200 - 3000 m³/h
Measuring accuracy to the actual value	+/- 5 %
Nominal capacity	35 VA
Motor run time for 0-90°	2 seconds
Control time	3 seconds adjusted
Permitted system pressure	100 - 600 Pa

Inputs	
Voltage supply	230 V
Digital input	6 (freely parametrisable)
Analogue input	1 (freely parametrisable)
Sash detector	2 pieces (sash and horizontal sash detector)
Modbus connection	RS 232
PDR connection	RS 232
CAN bus	

Outputs	
Digital output	5 (freely parametrisable)
Analogue output	1 (freely parametrisable)
Control of AC3 Compact	RS 485
Control panel connection	RJ 10
CAN bus	
Motor control	RJ 45

Design	
Airflow damper and monitoring	Constant or variable

Control and monitoring

Airflow damper for room supply air and extract air

AC3 Compact

Areas of application

- Room input air controller
- Room extract air controller
- Airflow measuring system/measuring panel (without control flap and actuator)
- Extension module for AC3

Up to four AC3 Compact controllers can be connected and managed for each AC3 controller.

AC3 Compact

AC3 Compact, the microprocessor-based electronic control unit, controls the air volume infinitely.

It rapidly and precisely adjusts the air exchange rate to suit the set value using defined control behaviour (predictive and adaptive).

Performance criteria

- Control parameters are adaptively optimised on-line
- Standard tolerances are predictively corrected using a theoretical process model
- Control of the position of the motorised damper
- Floating time 5 seconds adjusted
3 seconds 80 % of the set value
- Freely parametrisable on a PC basis
- Integrated pressure sensor 0-250 Pa (pressure-resistant up to 2500 Pa)
- Motorised damper housing: galvanised, stainless steel, PPs

Connections (partly parametrisable)

- 2 x analogue output
- 1 x analogue input
- 1 x digital input
- 1 x control panel input RJ 10
- 1 x Modbus input internal RJ 45
- 1 x Modbus output internal RJ 45
- 1 x motor output RJ 45
- 1 x connector with twin terminals
24 VAC/DC, I max. 0.7 A (17 W)

AC3 Compact

Actuator

Galvanised controller housing with AC3 Compact and fast actuator

Control and monitoring

Airflow damper for room supply air and extract air

For optimum adaptation of the airflow dampers to the air exchange rate range and the size of the duct network, the measuring panel sizes (B1/B0/B2) are available for each dimension. The standard version of the airflow dampers includes the measuring panel B1.

Maximum air velocity in the measuring panel:

B1: 7 m/s; B0: 5 m/s; B2: 10 m/s

Control and monitoring

Monitoring

Control – Function display (FAZ) for fume cupboards EN 14175-2

EN 14175-2 requires continuous monitoring of the ventilation function of fume cupboards to warn the laboratory personnel with visual and acoustic signals in the event of a fault. The visual signal cannot be cancelled.

The FAZ is an electronic monitoring system that continuously measures the extract air volume rate. It provides an acoustic alarm and a visual alarm when the flow rate drops below the threshold set for the extract air. Since the air exchange rate and – if applicable – the Secuflow technology are continuously checked, permanent monitoring of the fume cupboard's ventilation function is ensured.

The display is in the guide profile on the fume cupboard. Alarms, e.g. shortage of air, are indicated in red and warnings, e.g. exceeding the max. operational sash opening height, are indicated in orange. The acoustic alarm can be deactivated by pressing a switch button. Switching on/off the FAZ by the user can be enabled as an option.

Airflow measurement FAZ

The extract-air manifold on the fume cupboard is used to generate the pressure signal.

The measurement is a differential pressure measurement. The function display works independent of room pressure fluctuations and independent of the sash opening.

During night operation, a second air volume can be monitored.

Control and monitoring Monitoring

Differential pressure measurement FAZ

1 Extract manifold, available in two designs:
Diameter of 250 mm and diameter of 315 mm
2 Pressure sensor

Diameter of measuring tube of 250 mm
for fume scrubber and filter fume cupboards

Monitoring	Function display (FAZ)
Power supply	230 V
Outputs	Alarm output Operating message Light switch
Inputs	On Off Acoustic alarm acknowledgement Night operation
Diameter [mm]	250, 315
System connection	Analogue I/O, Modbus

Sash controller SC

If the operator slightly moves the sash, the opening or closing movement of the sash is supported and continued by a motor.

The sash electronics close the fume cupboard sash using a motor when the fume cupboard is not in use. The area in front of the fume cupboard is monitored by a motion detector. If no movement is detected in front of the fume cupboard for a certain period of time, the sash is closed. The photo-electric barrier integrated in the bottom edge of the sash is used to detect obstacles in the path of the sash and the closing process is stopped.

The use of a sash controller means that the requirement in TRGS 526 to close fume cupboards when they are not currently in use is implemented automatically in practice.

The closing delay after the sensors are enabled can be set between thirty seconds and fifteen minutes.

In combination with an Airflow Controller, the SC can also be connected to the DDC/GLT.

Component parts:

- 1) Processor-controlled central control unit
- 2) Motor drive (closes and opens the sash)
- 3) The photo-electric barrier integrated in the sash frame serves to detect obstacles in the path of the sash when the sash is automatically closed
- 4) The motion detector stops the sash when working in front of the sash

Technical data SC

Closing device	Sash controller SC
Power supply	24 V DC
Nominal capacity	48 VA
