Participant Information Sheet – Observation Registered Nurses

04/07/2011 Version 2

Study Title: Academic award and Recontextualising/Re-using Knowledge (ArRK)

You are being invited to take part in a research study about whether level of academic award makes a difference to how registered nurses organise, delegate and supervise care at the University of Surrey and University of Salford. Before you decide whether to participate it is important that you understand why the research is being done and what it will involve. Please take time to read the following information carefully. If there is anything that is not clear, or if you would like more information please get in touch with the research team (contact details at the end of this information sheet).

Researchers: Dr Helen Allan, Professor Martin Johnson, Professor Karen Evans, Dr Khim Horton and Ms Carin Magnusson.

What is the purpose of this project?

This study will investigate the effects of university award on registered nurses' ability to recontextualise or re-use knowledge learnt in university to allow them to organise, delegate and supervise care on the wards when working with and supervising healthcare assistants.

Why have I been chosen?

You are being asked whether you would like to participate in this study because you are a registered nurse working in older care or general medicine. Observing your practice as you organise, delegate and supervise bedside care will be highly valuable.

Do I have to take part?

It is up to you to decide whether or not to take part. If you do decide to take part you would be given this information sheet to keep and be asked to sign a consent form. If you decide to take part you are free to withdraw at any time and without giving a reason.

What will taking part involve?

If you decided to participate, you would be observed by a trained observer in the ward for **five** shifts. The observation would be arranged on a date convenient to you. The purpose is to observe your role and experience as a registered nurse as you organise, delegate and supervise bedside care undertaken by HCAs. Notes will be taken by one of the researchers as they observe you. The purpose of the observations is to observe your practice to understand how you re-use academic knowledge in clinical practice. Observations do not judge your ability to deliver bedside care. Although, if unsafe/unprofessional practice is observed, the usual professional procedures will be followed. The notes will be stored in a safe place and only the research team will have access to them. The notes will be destroyed in accordance with University regulations and/or if you should decide to withdraw from the study. You will not be identified by name or any other person specific details. The observation will be undertaken by Ms Carin Magnusson, Professor Martin Johnson or Dr Helen Allan.

What are the possible benefits of taking part?

There will probably be no direct benefit to you other than the opportunity to reflect on your management of registered nurses and this may itself lead to change in your practice for the better. Indirectly, as this study will contribute to the profession's understanding about how to educate nurses so that care can be safely delivered and supervised, you may benefit in the future from changes to curricula and teaching processes which may emerge from the findings.

What are the possible disadvantages or risks to taking part?

There are no foreseen disadvantages or risks to taking part. However, if as a result of the interview, issues are raised for you which you wish to discuss further, the researchers would suggest contact could be made with trades union representatives, human resources departments or counseling support.

In the unlikely event that you are harmed by taking part in this research project, there are no special compensation arrangements. If you are harmed due to someone's negligence, then you may have grounds for a legal action but you may have to pay for it.

If you wish to make a complaint or have any concerns about any aspect of the way you have been approached or treated during the course of this study, please contact - Dr Helen Allan, Reader in Nursing and Director of the Centre for Research in Nursing and Midwifery Education, Principal Investigator, Division of Health and Social Care, Faculty of Health and Medical Sciences, University of Surrey in the first instance. Email h.allan@surrey.ac.uk or telephone on 01483 689745.

Should you fail to be satisfied with the response that you receive, please contact – Professor Karen Bryan, Head of Division of Health and Social Care, Faculty of

Health and Medical Sciences, University of Surrey. Email K.bryan@surrey.ac.uk or telephone on 01483 682507.

The University is indemnified under its third party insurance policies against claims by third parties for loss, damage or injury which can be shown to have arisen out of its activities and to be due to its negligence.

Would my taking part in this study be kept confidential?

You would be given a pseudonym for the research and only the researcher would have access to consent forms and to the computer records where your real name would be stored. All information which is collected about you during the course of research would be kept confidential, in accordance with the Data Protection Act 1998.

What would happen to the results of the study?

Anonymised findings will be used for a final report, academic papers and for dissemination via user networks.

Who is this study funded by?

This study is funded by the General Nursing Council Chair of Nursing Education at the University of Surrey Trust.

Who has reviewed the study?

Yes - the study has been reviewed by the Ethics Committee at Bromley and the University of Surrey Ethics Committee who have both given a favourable opinion.
