

FACT #4

FINE PARTICLE CONCENTRATIONS IN A ROAD-FACING CLASSROOM CAN DOUBLE DURING DROP-OFF HOURS.

Reduce traffic emissions adjacent to the school by restricting vehicle entry and relocating drop-off points away from the school entrance.

CHILDREN

- Avoid opening doors or windows in classrooms next to drop-off points.

- Drop-off/pick-up points should be away from classroom entrances.

SCHOOL

- Children should be directed to relevant classrooms via interior doors/routes, to restrict exposure to traffic emissions from drop-off/pick-up points.
- Access to classrooms via doors that face towards/close to traffic congestion should be restricted to reduce the impact of traffic-emitted particles on indoor air quality.

COMMUNITY

- Avoid vehicle use during drop-off/pick-up hours wherever possible, and try to park cars away from school entrances.
- Encourage parents and children to walk or cycle to/from schools.
