### **Module descriptor**

**Nursing Studies: Child** 

Module prefix	NUR - (Nursing Studies	s)					
Module title:	Children and Young people Nursing 2.						
FHEQ level:	5						
Module Leader:	Zoe Polly						
Other contributors:	Nursing Team (adult, mental health and child)						
Number of credits:	120						
Number of ECTS credits:	60						
HESCOS Code:	100280						
Module availability:	Year Long						
Overall student workload:							
Workshop Hours:	0						
Clinical Placement Hours:	915						
Independent Study Hours:	200						
Lecture Hours:	0						
Seminar Hours:	200						
Tutorial Hours:	30						
Laboratory Hours:	0						
Practical/Performance Hours:	50						
Student Cap:	100						
Date of production:	21/10/2020						
Assessment pattern:							
Assessment Name	Assessment Type	Weighting% or Pass/Fail	Credit value				
Evidence Enquiry	Coursework	100%	30				
LTC polypharmacy written submission	Coursework	50%					
210 polyphalmady whiteh sabililosion	Coursework	0070	45				
Viva/OSCE (Assessing and managing complexity)	Oral-type examination or presentation	50%					
Safe Medicate (90% pass mark)	Examination	Pass/Fail					
Practice Assessment Document (Year long)	Pass/Fail Professional	Pass/Fail	45				
Written clinical account	Competencies Coursework	100%					

# Formative:

- Case study: Service user needs LTC
- Article review and discussion of significance to practice
- Think out loud activity: interactive, decision making exercise
- Written submission of scenario-based decision making
- x6 Safe medicate 1 hour (Year long)

## **Alternative assessment:**

None

## Pre-requisite/co-requisites:

None

## Module overview:

This module provides a sequential and integrated learning experience using theory and practice, by a spiraling of content that supports student development. Students will be supported to apply their knowledge of altered physiology and body functioning to commonly encountered mental, physical, behavioural and cognitive health conditions. There will be a focus on management of increased complexity in patient care, with placement experiences that support and reflect the learning within university learning blocks. Students will have an opportunity to consider the wider scope of leadership innovation and change management and its impact on care on teams and care provision.

Practice within simulation and placement will enable students to further develop clinical proficiencies and assessment and decision-making skills, focusing on the management of complexity within holistic scenarios.

## Module aims:

To enable students to assess and apply knowledge of altered physiology and body functioning to commonly encountered mental, physical, behavioural and cognitive health conditions; to inform clinical assessment, decision making and interventions (including pharmacology and medications management).

Students will have an opportunity to consider the wider scope of leadership innovation and change management and its impact on care on teams and care provision.

Enable students to explore the relationships between physical and mental health in order to effectively implement holistic care develop the knowledge, skills and understanding of the management of long term condtions within different healthcare contexts.

Consider the impact on the person, their family and how to actively support and empower self care. Explore the concept of empowerment and its application to contemporary adult health care practice.

Learning outcomes:					
Learning Outcome	K	С	Ρ	Т	Optional Ref
1. Understand and evaluate the principles of holistic care and	$\boxtimes$	$\boxtimes$	$\boxtimes$	$\boxtimes$	
assessment promoting individuals' rights, dignity, interests,					
preferences, beliefs and cultures, developing an					
understanding of human identity using a person-centered					
approach.					
<ol><li>Demonstrate personal and professional values and behaviour in accordance with relevant professional codes</li></ol>	X	$\boxtimes$	X	$\boxtimes$	
•					
including taking responsibility for seeking and responding to					
feedback to develop professional knowledge and skills.					
3. Demonstrate the knowledge and ability to effectively	$\boxtimes$	$\boxtimes$	$\boxtimes$	$\boxtimes$	
communicate and contribute to healthcare practice utilising					
a range of strategies with colleagues and people across the					
lifespan.					
•					
<ol> <li>Applies knowledge to identify solutions for ongoing care</li> </ol>	$\boxtimes$	$\boxtimes$	$\boxtimes$	$\boxtimes$	
and co-existing health needs, that considers psychological					
wellbeing, economic and social/cultural circumstances.					
5. Act with an understanding of legal and ethical frameworks	$\boxtimes$	$\boxtimes$	$\boxtimes$	$\boxtimes$	
and policy to inform professional care delivery and evidence-					
based practice, recognising and reporting any situations,					
behaviours or errors that could lead to poor care.					
	_	_			
6. Identify and analyse knowledge of anatomy and physiology	$\boxtimes$	$\boxtimes$	$\boxtimes$	$\boxtimes$	
of body systems across the lifespan when assessing,					
planning and delivery care interventions.					
7. Apply knowledge of altered physiology and body functioning	$\boxtimes$	$\boxtimes$	$\boxtimes$	$\boxtimes$	
to commonly encountered mental, physical, behavioural and					
cognitive health conditions to inform clinical assessment,					
decision making and interventions (including pharmacology					
and medications management).					
8. Evaluate and apply evidence to inform practice, utilising	$\boxtimes$	$\boxtimes$	$\boxtimes$		
different types of evidence including research, policy and					
governance frameworks.					
9. Apply evidence to health care interventions and the	$\boxtimes$	$\boxtimes$	$\boxtimes$	П	
evaluation of health care provision to ensure the use of					
evidence to improve person-centred care.					
10. Analyse a range of research methodologies to inform the	$\boxtimes$	$\boxtimes$	$\boxtimes$		
development of professional knowledge and skills.					
11. Demonstrate ability in a range of relevant clinical skills in	$\square$	$\boxtimes$	$\square$	П	
simulated and clinical environments utilising health care					
technology.					
	$\boxtimes$	$\boxtimes$	$\boxtimes$		
your role within a team, understanding the principles of					
leadership, human factors and strength-based approaches					
when working in teams to safely and effectively deliver person centered care.					
centered care.					
13. Build partnerships and therapeutic relationships with service	$\square$	$\boxtimes$	$\square$		
users, carers, families and other professionals to ensure safe,				╚	
effective and non-discriminatory care.					
<b>,</b> <del></del> -	1				

14. Apply the knowledge from an evidence base to underpin a person-centered approach to shared assessment, planning and decision making when working with service users, carers, families and other professionals	$\boxtimes$			
15. Understand the need to evaluate the effectiveness of care using an evidence base, by self or others, and understand appropriate quality improvement strategies and methodologies to enhance person centered care across the lifespan				
16. Demonstrate the importance of safe practice and an understanding of risk management strategies, local and national guidelines across a range of clinical environments.	$\boxtimes$	$\boxtimes$	$\boxtimes$	
17. Apply an understanding of public health within practice to support and enable people to make informed choices about their care to manage health, life choices, illness and care.	$\boxtimes$	$\boxtimes$		

Key: C-Cognitive/Analytical; K-Subject Knowledge; T-Transferable Skills; P- Professional/ Practical skills

#### **Module content:**

#### Shared across field

- Understand, research, analyse and synthesise evidence to inform an innovative solution to practice.
- Team working and leadership styles including underpinning theories.
- Reflective learning strategies to evaluate own practice and develop accordingly.
- Service redesign and change management including the role of service users and carers in development of services, influencing and negotiating skills and managing resources – time, people, finances.
- Mental and physical health comorbidities and interactions in a social context across the lifespan drawing upon evidence to support understanding.
- The interaction between cognitive abilities and disabilities, mental health and physical well–being.
- Service user and carer focused approach to understanding and relieving psychological and physical distress.
- Range of interventions and evidence to inform a choice of strategies for managing effective, holistic delivery of care, taking account of ethical issues associated with care.
- Furthering knowledge about medication management including more complex delivery methods and medication interaction.
- The benefits and challenges of interdisciplinary and interagency working and communication strategies, including looking after own emotional wellbeing (Mental Health First Aid).

# Field specific

- Effect of unplanned and unscheduled care
- Evidence based management of emergency situations
- Communication strategies challenging situations
- Management of children in pain
- Recognition of the critically ill and deteriorating child
- Physical assessment of infant, child and young person
- Applied physiology
- Chronic illness and evidence based management of long term conditions
- Care pathways
- Inter-professional working
- Adolescent care
- Neoantal care
- Applied pharmocology
- Berreavement and loss
- End of life care
- History of nursing children
- Children as a vulnerable group across the age spectrum
- The nurse as an advocate
- Interprofessional communication and working
- Child and Family Centered Care
- Policy & Politics in Relation to Child Health
- Ethical Principles in Child Health
- Service User Perspectives
- Children's Rights, Child & Family Law
- Children's understanding of illness
- Child & Adolescent Mental Health
- Safeguarding Children and Vulnerable Families: Are families the best place for all children?
- The challenges of empowering children with disabilities and complex care needs.

## 2<sup>nd</sup> year core and field related skills and proficencies (Skills Passport)

A range of clinical skills will be taught and practiced in a simulated environment utilising a range of health care equipment in preparation for supervision within practice learning settings.

## Methods of teaching/learning:

The <u>learning</u> and <u>teaching</u> strategy is designed to:

This module provides a sequential and integrated learning experience using theory and practice, by a spiraling of content that supports student development. There will be a focus on management of increased complexity in patient care, with placement experiences that support reflect the learning within the university learning blocks. Students will have an opportunity to consider the wider scope of leadership innovation and change management and its impact on care on teams and care provision.

Practice within simulation and placement will enable students to further develop clinical proficiencies alongside assessment and decision-making skills, focusing on the management and evaluation of complexity within holistic scenarios within different care environments.

- Simulation
- Lectures
- Seminars
- Online self-test / additional learning materials / discussion boards / student forums
- Classroom discussions
- Student-led seminars a
- Lectures
- Problem based learning
- Case studies / scenarios
- Experiential learning
- practice placement experience

## Assessment strategy:

The assessment strategy is designed to provide students with the opportunity to demonstrate an understanding.

This will be alongside the practice-based proficiencies, within the practice assessment document in order to achieve the criteria set by the Nursing and Midwifery Council, (NMC 2018x). Progression will be confirmed by the practice assessor and the assigned academic assessor.

### Thus, the summative assessment for this module consists of:

- Evidence Enquiry (2 pieces of primary research, critically appraised and significance for practice explored) 3000 words
- Case scenario write about decision-making, care/treatment plan 3000 words
- X1 VIVA/OSCE (explain the treatment of a case assessment treatment and evaluation) 20 mins
- Safe Medicate pharmacology exam/year 2
- Completion Practice Assessment Document requirements
- Written Clinical account 1000 words

## Formative assessment: compulsory elements

Formative feedback via surrey learn

- Formative 1 Service user needs with a long-term condition 500 words
- Formative 2 EE- article checking and significance discussion (peer supported)
- Formative 3- Think out loud activity, online
- Formative 4- Written submission of scenario-based decision making

## **Additional formative activities**

- Self-tests (Applied A&P)
- Think out loud activity
- Simulation with actors
- Reflective learning journal
- Safe medicate tests- applied pharmacology

## **Feedback Mechanisms**

- Continuous feedback from teaching fellows & actors within university learning blocks
- Continuous feedback from practice, whilst on placement learning blocks
- Online feedback
- Peer feedback
- Personal tutor feedback
- Service user and carer feedback

Other Information:
None
Additional Costs:
Included in fees.
included in idea.
