EUROPE SITUATIONS: DATA AND TRENDS ARRIVALS AND DISPLACED POPULATIONS

Regional Bureau for Europe | October 2022

Arrivals of refugees and migrants in Europe between 1 Jan and 31 Oct 2022 (source: https://reporting.unhcr.org/index.php/document/3868)

BACKGROUND

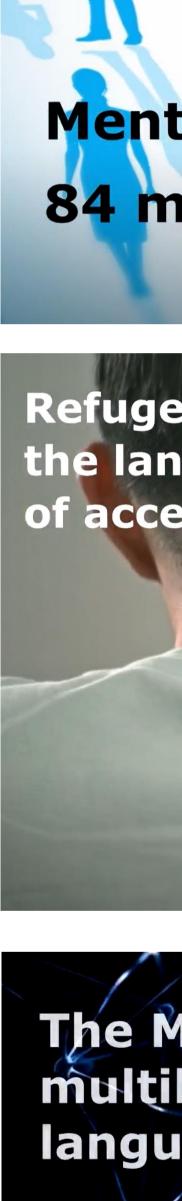

Mental health problems affect about 84 million people across the EU. Refugees and other migrants are particularly at risk of developing mental health problems due to stressors they encounter before, during, and after their migration process. Prevalence rates for some mental health problems, such as posttraumatic stress and psychotic disorders, are higher among refugees and migrants compared to non-migrant populations. Even though many refugees and migrants need treatment for their mental health problems, they have great difficulties in accessing mental healthcare services, particularly those who do not speak the dominant language of their host country. Furthermore, if they succeed in gaining access to mental healthcare services, treatment often lacks cultural and linguistic sensitivity, resulting in inadequate care.

PROJECT OBJECTIVE

In this project, 13 partners from 9 European countries develop, test, and implement a multilingual, culturally-sensitive, evidence-based digital information and communication platform in mental healthcare. This platform aims to reduce the negative impact of linguistic and cultural barriers in accessing mental healthcare services for refugees and migrants. The platform will be based on evidence regarding the availability of high-quality language resources, stakeholders' needs, and barriers, and proven effective intercultural communication strategies. The main stakeholders to benefit from this new resource are refugees and migrants, their caregivers, interpreters, intercultural mediators, and mental healthcare professionals and organizations.

The Centre for Translation Studies (CTS) is the lead partner of Workpacakge 2: Barriers, Needs, Communication Strategies.

CTS Team: Sabine Braun (lead), Elena Davitti, Graham Hieke, Demi Krystallidou, Constantin Orăsan, Fang Wang, Özlem Temizöz

PROJECT LEAD: University of Amsterdam DURATION: 1 Jan 2022 – 31 Dec 2024 https://www.mhealth4all.eu/

EXPECTED OUTCOMES

• A resource repository primarily targeted at healthcare providers included in the open-access digital platform to enhance their knowledge of how to access language support in mental healthcare

• A set of education and communication strategies addressing these barriers and needs.

• A set of recommendations regarding the suitable integration of automated translation as a macro-strategy integrated into more comprehensive solutions for accessing mental healthcare. • A number of multilingual educational videos (around 3-5 minutes each), whose content will be based on the most severe barriers, salient needs, and recommended communication strategies. • A number of educational videos (minimum of 10, around 2-3 minutes each), whose content will correspond with identified highquality resources to mitigate the language barrier in mental

• An open-access information and communication platform. If the process and effect-evaluation yield positive results, the platform will be disseminated into the wider community to stimulate uptake for any refugee and migrant patient group in Europe.

Funded by the Asylum, Migration and Integration Fund (AMIF) of the European Union
