Ceramics and Ceramic Coatings

Department of Mechanical Engineering Sciences

Faculty of Engineering & Physical Sciences

Monday 5 March to Friday 9 March 2018

Ceramics and Ceramic Coatings is also part of the Advanced Materials MSc programme which is accredited by IOM3 and IMechE
The Course
The course will provide a detailed consideration of the fundamentals and underpinning science of the processing and properties of engineering ceramics and ceramic coatings. Topics such as wear, thermo-mechanical behaviour and design will be addressed. Where appropriate, examples of actual materials and components will be used to illustrate these generic principles and new developments will be identified. The lecture content will be reinforced and enhanced through tutorial/exercise class sessions.

Who Should Attend?
The course is designed for scientists and engineers seeking an understanding of engineering ceramics and ceramic coatings. It will be suitable for graduates with no or limited ceramic experience wishing to widen the scope of their knowledge. There are no formal prerequisites but some basic knowledge of materials science will be assumed.

Outline of the Course Design
• Overview of Materials and Application Areas
• Processing of Bulk Ceramics
• Thin Film Growth
• Thick Film Processing
• Mechanical Properties of Ceramics and Coatings
• Thermo-Mechanical Behaviour
• Interfaces and Adhesion of Coatings
• Mechanical and Wear Test Methods
• New Developments in Wear Resistant Coatings
• Joining of Ceramics
• Designing with Ceramic
• Ferroelectric and Related Properties

MSc in Advanced Materials
This short course is offered as a module in our part-time or full-time Modular MSc Programme in Advanced Materials. Further details of our programme can be found on our web pages

Key Points
surrey.ac.uk/mes/study/pd/courses for Course Calendar and Online Registration Form
Courses run for one week from 9am – 5pm Monday to Friday
Delegates may request a list of local accommodation
Enquiries to: 01483 686122
Previous attendees

 TripAdvisor Very good short course with the right balance between scientific and practical applications. TripAdvisor

 TripAdvisor Very enjoyable and useful course for my professional development at work. TripAdvisor

 TripAdvisor Overall a very good and informative course covering a wide variety of ceramics material and applications. TripAdvisor

 Comments from delegates

 Course Directors

 The course team are led by Professor Robert Dorey who is a Chartered Engineer and Scientist, and Dr Mark Baker who is a Chartered Scientist. They are Fellows of the Institute of Materials, Minerals and Mining.

 They will be joined by colleagues from across the University of Surrey’s materials activity, as well as external expert, Professor Roger Morrell.

 These short courses have been approved for “Professional Development” by IOM3 (Institute of Materials, Minerals and Mining).

 Centre for Engineering Materials

 The course is delivered from the Centre for Engineering Materials, home to the biggest concentration of materials researchers at Surrey with interests spanning all materials groups form the nanoscale through to macroscopic engineering structures.

 Across the University there are over 50 academics, residing in six engineering/physical science departments, for whom materials is a primary research interest.

 Together they form materials@surrey.ac.uk. The research, which is recognised as being internationally excellent, spans topics as diverse as the production of graphene through to the mechanical testing of metre long sections of Victorian water mains. Much of the work is underpinned by the University’s world-leading capability in characterisation, which comprises both facilities and expertise. Further, Surrey has a history of working in partnership with industry and a proven track record in delivering academically acclaimed and industrially relevant postgraduate courses.

 The University is also home to the thriving, much-admired Engineering and Physical Sciences Research Council (EPSRC) Centre for Doctoral Training in Micro and NanoMaterials and Technologies surrey.ac.uk/minmat, which was established in 2009, and subsequently refunded in 2014, with awards amounting to over £9 million from the EPSRC and sponsorship of engineering doctorate students from over forty companies, to date.
